Nguyễn Thành Vinh

Data Analyst

To develop as a **Data Analyst** delivering **high-quality analysis**, **dashboards**, and **actionable insights** that improve engagement, retention, and monetization. In the long term, I aim to grow into a **Data Scientist** by applying Machine Learning and advanced analytics to solve complex, large-scale business problems and support data-driven decision-making.

Ho Chi Minh City

EDUCATION

University of Economics Ho Chi Minh City

Data Science

2022 - 2025

- **GPA** 3.9/4.0
- **Second Place** in the Economics **Debate** Competition
- **First Prize** in the **Business Analyst** Competition
- **IBM Data Science Certificate** Professional
- **680 Toeic**

SKILLS & CERTIFICATIONS

Programming

- Python, SQL, C#

BI Tools

- Power BI, Looker Studio

Data Analytics

- Data Modeling, Data Cleaning & Transformation, Machine Learning
- Google Tag Manager (GTM), Google Analytics 4 (GA4), Excel

WORK EXPERIENCE

07/2025 - Now

Lucky Star Vietnam Garment Co., Ltd

Data Analyst

Supplier Lead Time & Fabric Inventory Risk Management System

- Built a dashboard system to monitor **supplier fabric lead time,** combined with **current and future fabric inventory analysis**
- Provided an end-to-end view of **material delay risks, warehouse over-capacity, and inventory value exceeding defined thresholds**
- Automated **daily email alerts** for orders showing early warning signs of delay or overdue status to BUs and fabric warehouses
- Helped **10+ BUs save ~90% of manual tracking time**, reduced order delay risks, and ensured **data accuracy and consistency across departments**

End-to-End Order Traceability & WIP Visibility Platform

- Built an **end-to-end traceability and WIP (Not Yet Done) visibility platform** across **all Brands**
- Integrated data across **the full production lifecycle**: *Materials → Cutting → Embroidery/Printing → Request & Fabric Warehouse Issuance → Sewing Output → Remaining → Finished Goods Warehouse → Shipping*
- Delivered **Not Yet Done / WIP reports** enabling Management and PPC teams to accurately track **current and future Work In Progress** for **line planning, manpower allocation**
- Established a **single source of truth**, supporting **detailed Excel exports and executive summary reports**; automated email alerts for **data discrepancies or rule violations** between departments
- Reduced **95% of PPC reporting effort (~12 hours/week)** and eliminated **100% of manual progress inquiries**, enabling early bottleneck detection and proactive delay mitigation

High-Volume Scan Shu Data Processing & Optimization

- Built Scan Shu monitoring reports, handling **large data volumes**, requiring fast and reliable query performance
- Designed data models and applied **partitioning and processing by PONumber** to optimize system resource usage

- Significantly reduced server load and improved **query performance and report loading time**
- Ensured **system stability and scalability** as data volume continued to grow over time

03/2025 - 06/2025

Asia Flames Co., Ltd

Data Analyst Intern

- Monitored and visualized **digital marketing website user behavior** using **GTM, GA4, and Looker Studio**, analyzing **user flow, engagement rate, session retention, and content performance** to support optimization of user experience and marketing campaign effectiveness.
- **Supported internal departments** (HR and Accounting) by processing and analyzing data from internal management systems, delivering visual reports and actionable insights to enhance operational efficiency and support data-driven decision-making.

05/2025 - 06/2025

Group Project

Forecasting F1 Results (Big Data)

- Developed a scalable end-to-end data pipeline leveraging Python, FastF1 API and Apache Spark to collect and process race data.
- Engineered key features including pit stop strategies, weather conditions, and driver consistency metrics.
- Built predictive models using Random Forest, XGBoost and Neural Networks to forecast race outcomes.
- Implemented time-based cross-validation and automated hyperparameter tuning to optimize model performance.

10/2024 - 11/2024

Group Project

UIT Data Science Challenge 2024 – Multimodal Sarcasm Detection

- Built a multimodal sarcasm detection system using **text and image data**
- Applied **OCR + image cropping** for text extraction and **CLIP** for unified text–image embeddings
- Developed a **CNN with Self-Attention**, handling class imbalance using **oversampling and weighted loss**
- Evaluated with **F1-macro** and achieved **Top 1 ranking for over half** of the competition period
